1. f
2. 3

test one of change to spellchecker

Check Spelling

Stack name
<div>Stack name</div> <div><input type="text" value="TestSFLStack"/></div> <div>Stack name can include letters (A-Z and a-z), numbers (0-9), and dashes (-).</div>
Parameters
Parameters are defined in your template and allow you to input custom values when you create or update a stack.
Lambda Code Location in S3
WOOLambdaZip S3 object key for the WOO lambda function deployment zip file <input type="text" value="WOO.zip"/>
StringDetectionLambdaZip S3 object key for the string detection lambda function deployment zip file <input type="text" value="StringDetection.zip"/>
LambdaCodeS3Bucket Name of bucket that the lambda code zip files are in <input type="text" value="sfl-text-detection"/>
LambdaLayersZip S3 object key for the lambdas library layer zip file <input type="text" value="lambda_layers.zip"/>
S3 Bucket Configuration
InputBucketName Name of bucket to store input files <input type="text" value="textdetectioninputbucket"/>
OutputBucketName Name of bucket to store output files <input type="text" value="textdetectionoutputbucket"/>
ConfigS3Bucket Name of bucket that the configuration json file is in <input type="text" value="sfl-text-detection"/>
ConfigFile Name of the configuration json file <input type="text" value="config.json"/>

run spell check on 5-10 repos and get the base words for the wordlist.txt file to put in the template

is there a way to check the history of vestigial code comments to use that to create better rules to check?

set it up so that once you push, you see the actions in the terminal.

look up what needs to be installed locally (in theory only python)

By eod tomorrow

is there a way to check the history of vestigial code comments to use that to create better rules to check? [@Nick Smith]

set it up so that once you push, you see the actions in the terminal. [@Nick Smith]

look up what needs to be installed locally [@Nick Smith]

Stretch goals:

PR message standardization: Create a template with a prefilled body [@Nick Smith to propose]. Implemented as an MD file under the .github folder

point out in the demo that these suggestions in subsequent PRs will be able to be merged by the dev because there isn't branch protection/limitations on the dev branches, only on master
